Gerard and Anthony,

The Colorado Department of Public Health and Environment has amended the FY2016-2017 Colorado Environmental Performance Partnership Agreement (CEPPA). The amendment, made with the concurrence of US EPA Region 8, appears as an additional FY2017 activity in Section 1.29 of the Air Pollution Control Division work plan. The amended work plan is attached here and will be uploaded to the EPA MAX portal.

The reason for the amendment is as follows:

*As a result of the Ozone NAAQS promulgated in 2015, revisions to the Photochemical Air Monitoring Stations (PAMS) network established 43 required PAMS stations leveraging the existing NCore network and a flexible enhanced monitoring program (EMP) network that could include currently operating PAMS stations. The 43 required stations, in ozone non-attainment areas that are designated as moderate or higher, should begin operating no later than June 1, 2019. EPA support for the PAMS implementation will include monies for the purchase of an Auto-GC, a ceilometer and a True NO2 monitor. The Denver/North Front Range area of Colorado is designated as a moderate non-attainment area for ozone. Colorado has elected to be a partial early-implementer for the new PAMS network, specifically by purchasing and installing a ceilometer. EPA will make these early-implementation funds available via the 2016-17 PPA, totaling an addition of \$41,500.*

Thank you.

---
